## PROBLEM

(STATS P1 IES ISS 2019 Q16) Let  $X$  be a Poisson random variable with p.m.f

$$P(X = k) = \begin{cases} \frac{e^{-\lambda} \lambda^k}{k!}, & k = 0, 1, 2, \dots; \lambda > 0 \\ 0 & \text{otherwise} \end{cases} \quad (0.0.1)$$

If  $Y = X^2 + 3$ , then what is  $P(Y = y)$  equal to?

- (A)  $\frac{e^{-\lambda} \lambda^{\sqrt{y-3}}}{\sqrt{(y-3)!}}$ , for  $y = \{3, 4, 7, 12, \dots\}$
- (B)  $\frac{e^{-\lambda} \lambda^{-\sqrt{y-3}}}{\sqrt{(3-y)!}}$ , for  $y = \{3, 4, 7, 12, \dots\}$
- (C)  $\frac{e^{-\lambda} \lambda^{\sqrt{3-y}}}{\sqrt{(3-y)!}}$ , for  $y = \{4, 7, 12, \dots\}$
- (D)  $\frac{e^{-\lambda} \lambda^{-\sqrt{3-y}}}{\sqrt{(3-y)!}}$ , for  $y = \{4, 7, 12, \dots\}$

## SOLUTION

$$Y = X^2 + 3 \quad (0.0.2)$$

$$X = \sqrt{Y - 3} \quad (0.0.3)$$

We can substitute  $k = \sqrt{y - 3}$  in (0.0.1)

$$p_Y(y) = \begin{cases} \frac{e^{-\lambda} \lambda^{\sqrt{y-3}}}{\sqrt{(y-3)!}}, & y = 3, 4, 7, 12, \dots \\ 0 & \text{otherwise} \end{cases} \quad (0.0.4)$$

Hence, the correct option is (A).
